

# Ephesoft Transact

## Capabilities Summary

Ephesoft Transact is an advanced document capture and data extraction solution to help government agencies run more efficiently with streamlined processes, lower costs and safeguard important data. Ephesoft's Smart Capture™ technology offers supervised machine learning, so users can quickly respond to evolving document-reading challenges through the software's secure, verification browser-based interface.

Meanwhile, the software itself continues to add value as it gets smarter the more documents it ingests. The platform recognizes, sorts, classifies and extracts data from unstructured documents, even in formats it has never seen before. The system reads document content, extracting and interpreting its data, while simultaneously validating it 20 times faster than manual users.

### INPUT

**Any Source, Any Format:**

Physical documents, electronic documents and document images via mailbox, email, fax and file transfer.

### ANALYZE

**Automate:**

Intelligently identify documents types and metadata.

### DELIVER

**Enable:**

Automatically send data to ERP, ECM or other line of business systems.

Ephesoft Transact can routinely achieve a 90% or higher average field-level data extraction. It pulls key information directly from paper and electronic documents faster and more accurately than other technologies, without requiring templates, anchors, keywords or zones. Transact has been engineered to identify and make sense of a wide variety of documents, regardless of their size, use of symbols, language, formatting or image quality. Ephesoft capabilities expand the basic extraction of machine typed text, to the capabilities of extraction of handwritten data, check boxes and pixels. The metadata is then exported and delivered into a repository or line of business system. Advanced reporting and analytics are available.

## Use Case Examples:

- Archive long-term documents to one centralized repository
- Visibility, accessibility and auditing of records
- Process digital and paper documents, images, faxes and emails
- Eliminate manual sorting, data entry, physical shipping, mailroom labor, storage and validation of incoming documents and forms
- Centralized workflow process from the point of origin of documents
- Streamline human resources and records management paperwork, asset management and invoice processing

## Benefits

- ✓ Ephesoft is 100% browser based (Thin Client) modern architecture designed for fast implementations either on premise or in the cloud
- ✓ Secure with high levels of encryption to keep your data safe
- ✓ Scalable to millions of pages per day with unlimited document volume and number of users for a true enterprise solution
- ✓ The only capture solution that can run on both the Linux and Windows operating system platform because of its open source architecture
- ✓ Flexible licensing structure allows customers to select subscription licensing or perpetual licensing
- ✓ Productivity improvement averages 75%, which lowers costs and saves taxpayer dollars
- ✓ Increase compliance while reducing error rates
