

The Ephesoft Transact Cloud

The Ephesoft Cloud was built to provide intelligent document capture capabilities for all types of organizations. Whether you are a small business looking to automate your document-centric processes, or a large enterprise that wants to enhance existing applications, our cloud can provide exactly what you need. Below is an overview of our tiered offerings.

ENTRY

The Ephesoft Cloud Entry Level offering provides powerful document processing capabilities for the small business or department looking to get started with cloud capture. Subscriptions at this level are volume limited, either 12,000 or 24,000 images per year, and run in our multitenant cloud infrastructure.

STANDARD

The Ephesoft Cloud Standard Level provides a dedicated cloud instance for customers, and can provide document capture at volumes from 60,000 to 500,000 images per year. It includes our powerful web services layer, allowing the use of our mobile capture application, SnapDoc, and integrations with your line of business systems, workflow/BPM tools and developer projects.

PROFESSIONAL

The Ephesoft Cloud Professional Level is our fully capable dedicated instance, with access to all the optional components we provide: Web Services, Mobile, Advanced Reporting, Disaster Recovery and more. It provides licensing at the CPU core level, removing volume restrictions, and providing maximum throughput for time sensitive document processing. The instance runs on high level cloud infrastructure, providing maximum service levels and guaranteed uptime.

PREMIUM

The Ephesoft Cloud Premium Level is our top tier offering that takes advantage of Ephesoft's Clustering Technology for high level throughput, high availability and maximum efficiency. Each offering at this level includes two instances, and additional cores can be added for more throughput and processing power. By taking advantage of auto-scaling and elastic processing power, this level will meet the needs of the most demanding organizations.

Why Capture in the Cloud?

The Ephesoft Transact Cloud is the first fully functional intelligent capture platform to take full advantage of the cloud. With four different cloud tiers for all types of organizations and needs, document capture is now available to fit your specific use case. So why capture in the cloud?

Time to Value

On-premise software implementations can be a long-term journey with their lengthy budget cycles for capital expenditure approvals, need for IT resources, and additional budget for hardware. With the Ephesoft Transact Cloud your time to value is minimized and your intelligent capture platform can be up and running in a fraction of the time of on-premise offerings.

Access to Innovation

With SaaS offerings, access to the latest and greatest software is included. As we enhance the Transact Cloud, you can immediately take advantage of added features and efficiencies. Your subscription provides continuous value and appreciates over time as more features and functionality are added.

Cost of Ownership

Software-as-a-Service (SaaS) reduces the overall solution cost of ownership by including support and eliminating the need for hardware purchases, backups, monitoring, and dedicated administration. By including these costs in one recurring fee, complexity and overhead are reduced and IT spend becomes more predictable.

Scalability and Agility

The Ephesoft Transact Cloud is built for maximum scalability and agility. You can easily add more cores, features, and processing power depending on your requirements and needs. You can start small and grow with our flexible subscription model.

Competitiveness

Intelligent document capture isn't just for large organizations with an army of IT resources. Now smaller organizations can access enterprise-class technology and glean the advantages and efficiencies needed to stay competitive and challenge their larger rivals.

Capture Anywhere

The Ephesoft Transact Cloud provides intelligent document capture anywhere and on any device. You can automate document processes with a web browser, smartphone, or tablet. Today's mobile workforce can take full advantage of all the benefits the Ephesoft Transact Cloud can provide.
