

Add Document Intelligence to Blue Prism RPA

Ephesoft Transact, the leading smart document capture platform, provides intelligent document classification and data extraction, which can be appended to Blue Prism's robotic process automation (RPA) solution. Blue Prism's Digital Workers (software robots) provide business leaders with new operational capacity and intelligent skills to automate repetitive administrative tasks, while also meeting the requirements of the most demanding IT environments. Ephesoft's Document Intelligence VBO (visual business object) connects our APIs to an integrated Blue Prism design experience. This connection transforms unstructured data into structured data so Blue Prism's Digital Workforce can use a complete set of data. The combination of both technologies helps users make better, more informed decisions, and achieve better results.

Platform for Intelligent Automation

Ephesoft's Smart Capture® application creates actionable data so Blue Prism's Digital Workforce can maximize processing and analysis. Ephesoft's platform can integrate with Blue Prism in two ways:

- As a document and data onramp – Ephesoft Transact can ingest documents from a broad variety of sources, including: scanners, copiers, fax servers, folders, mobile devices, content services platforms and more. As documents are processed, the resultant data can be passed to an existing Blue Prism RPA process.
- Through our Web Services APIs – With a full suite of macro and micro services, Ephesoft Transact can be called mid-process to provide valuable document insight through classification and data extraction via our Blue Prism VBO.

OCR for Blue Prism	Document Classification	Data Extraction
At the most basic level, Ephesoft Transact provides powerful and extensive OCR capabilities in just about any language.	Documents being processed in Blue Prism can be automatically classified through our AI-enabled recognition engine.	Ephesoft's unstructured data extraction engine can tackle the most difficult document data structures in your robotic process.
Supervised Machine Learning	Scalable	Cloud
With our patented supervised machine learning engine, you can train and update your system through the application or Web Services.	Ephesoft Transact is designed to scale: it can work in small departmental projects or high-volume enterprise rollouts.	With cloud, hybrid and on-premises offerings, Ephesoft can provide solutions to meet organizational requirements.

About Ephesoft and Blue Prism RPA

Ephesoft is a Blue Prism Technology Alliance Partner (TAP) and provides a supported Document Intelligence Visual Business Object (VBO) that integrates with Blue Prism RPA. Ephesoft Transact is used in some of the leading, global financial institutions, working with RPA in a variety of use cases, including new account openings, loan approvals, and trade finance. Our application's flexibility and ease of integration create a powerful smart automation platform for any organization.
