

Add Document Intelligence Automation to Box

Maximum processing speed and efficiency in the cloud: Ephesoft + Box

Ephesoft applies supervised machine learning to help classify documents and collect valuable content from structured and unstructured data. Our solutions integrate easily with your deployment of Box, helping you better manage – and extract value from – your documents.

A critical step during digital transformation is to unlock that valuable, hidden data that is trapped inside both paper and electronic documents, including PDFs, emails, chats, scans, images and folders. By freeing your data, decision-makers and organizations can make meaning of the data, so it can be used intelligently. Content flows through Ephesoft Transact to be captured, classified, extracted and exported into Box.

The Power is in the Platform

Ephesoft Transact is the only true web-based and cloud-enabled capture technology on the market. Your solution has full access to a broad range of Web Services OpenAPIs that provide granular, micro-service capabilities. Need to OCR a document? Extract specific data? Classify on the fly? Our modern architecture provides developers with a full host of smart content capture and data discovery services.

1 Classification & Extraction

Ephesoft identifies document types (classification) and extracts key data (extraction) along with full-text OCR.

2 Migration

Fortify your migration to Box with metadata and document correlation. Ephesoft does not store data, so the Box repository is needed to hold and process the content once it's identified and key data is extracted.

3 Inside Box

Ephesoft extracts the data into Box. Here, the customer can access documents, perform a full-text search and report on all repository data.

4 Automation Benefits

Leveraging the two technologies reduces time spent manually processing documents and lowers costs with streamlined end-to-end processes.

Game-Changing Value

Web-Based Scanning

Through its HTML 5 web browser scanning interface, users can use any TWAIN scanner to add documents.

Web Upload

Upload documents through the Ephesoft web interface directly into the capture workflow.

Hot Folders

Network folders now become an automated pathway to Box.

Email

Email attachments and contents can be automatically processed.

CMIS

Our Content Management connector allows you to migrate files from your legacy content system into Box.

OpenAPIs/Custom

Ephesoft’s modern architecture is code-friendly to developers, allowing you to interface with APIs to create custom document ingestion methods.

Save Time with Auto-Mapping & Naming

Ephesoft’s supervised machine learning automatically classifies documents and extracts content to map into Box metadata fields and used to automatically name files.

“Working with Ephesoft and Box has been great. We found that Ephesoft’s innovative, cloud technology is on the forefront of the enterprise capture industry with highly responsive support from the executive level down to sales, marketing and technical support.”
